### AccuCoat Completes 15 Years in Business

AccuCoat finishes 2014 after 15 years in business. AccuCoat has consistently grown year after year, from a two man shop in the early years to a 14 employee, 9000 square foot facility today. We have undergone several expansions and equipment upgrades to accommodate the needs of our customers. We will continue to expand our capabilities to grow with the needs of our customers.

### AccuCoat Expands Lab Space

Due to steady growth and increased customer demands, AccuCoat has expanded again for the third time in company history adding an additional 1200 square feet of lab space. The new area affords the space to properly handle larger optics and high volume production.

### Additional Dynavac Chamber Added

AccuCoat has added a second Dynavac 52" chamber which is a twin to the one we put on line in 2012. Increased size and volume capacity of both glass and plastic optics have expanded our capabilities. Both chambers are able to coat substrates up to 19" (480mm) in diameter. This new chamber brings our chamber count up to six.

### See New Virtual Tour of AccuCoat

If you have not had a chance to visit AccuCoat's facility in person, we now have created a virtual tour of our facility for you to view on our website and You Tube. You can access the link here: [Link](#)
